Legal information

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

\land DANGER

indicates that death or severe personal injury will result if proper precautions are not taken.

🕂 WARNING

indicates that death or severe personal injury may result if proper precautions are not taken.

\bigwedge CAUTION

indicates that minor personal injury can result if proper precautions are not taken.

NOTICE

indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

M WARNING

Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by [®] are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Introduction

1.1 About SINUMERIK Service Assistance

SINUMERIK Service Assistance supports service experts in performing fault analysis on machine tools with SINUMERIK 828D/840D/ONE controllers. Three different options are available to individualize the level of support.

- Machine Transparency identifies all currently installed hardware components as well as firmware and software versions and their changes.
- Machine Condition enables the cyclic recording of extended status data on the control and drive technology and its selective evaluation.
- Error Analysis efficiently identifies and evaluates fault states and disturbances in machine tools based on intelligent filter options and a user-friendly interface.

1.2 About this documentation

1.2 About this documentation

Content

This manual describes the administration and configuration of the MindSphere application **SINUMERIK Service Assistance (SSA).**

Below information is described in detail:

- How to configure Manage MyMachine File Upload functionality to activate SSA Machine Transparency
- How to administrate / configure aspects and assets
- How to use SINUMERIK Service Assistance functionality

Target group

This publication is intended for machine operators, plant operators.

Standard scope

This documentation only describes the functionality of the standard version. This may differ from the scope of the functionality of the system that is actually supplied. Please refer to the ordering documentation only for the functionality of the supplied drive system.

It may be possible to execute other functions in the system which are not described in this documentation. This does not, however, represent an obligation to supply such functions with a new control or when servicing.

For reasons of clarity, this documentation cannot include all of the detailed information on all product types. Further, this documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

The machine manufacturer must document any additions or modifications they make to the product themselves.

Websites of third-party companies

This document may contain hyperlinks to third-party websites. Siemens is not responsible for and shall not be liable for these websites and their content. Siemens has no control over the information which appears on these websites and is not responsible for the content and information provided there. The user bears the risk for their use.

1.3 Documentation on the internet

1.3.1 MindSphere documentation for apps and solutions

MindSphere applications provide you with the functionality needed to solve your various industrial IoT use cases. You can find an overview of documentation for all MindSphere apps and solution on the MindSphere platform.

See also

MindSphere documentation (https://siemens.mindsphere.io/en/docs/apps-and-solutions)

Comprehensive documentation about the functions provided in SINUMERIK ONE Version 6.13 and higher is provided in the Documentation overview SINUMERIK ONE (<u>https://support.industry.siemens.com/cs/ww/en/view/109768483</u>).

You can display documents or download them in PDF and HTML5 format.

The documentation is divided into the following categories:

- User: Operating
- User: Programming
- Manufacturer/Service: Functions
- Manufacturer/Service: Hardware
- Manufacturer/Service: Configuration/Setup
- Manufacturer/Service: Safety Integrated
- Information and training
- Manufacturer/Service: SINAMICS

1.3 Documentation on the internet

Comprehensive documentation about the functions provided in SINUMERIK 840D sl Version 4.8 SP4 and higher is provided in the Documentation overview SINUMERIK 840D sl (<u>https://support.industry.siemens.com/cs/ww/en/view/109766213</u>).

You can display the documents or download them in PDF and HTML5 format.

The documentation is divided into the following categories:

- User: Operating
- User: Programming
- Manufacturer/Service: Functions
- Manufacturer/Service: Hardware
- Manufacturer/Service: Configuration/Setup
- Manufacturer/Service: Safety Integrated
- Manufacturer/Service: SINUMERIK Integrate/MindApp
- Information and training
- Manufacturer/Service: SINAMICS

Comprehensive documentation about the functions provided in SINUMERIK 828D Version 4.8 SP4 and higher is provided in the 828D documentation overview (<u>https://support.industry.siemens.com/cs/ww/en/view/109766724</u>).

You can display documents or download them in PDF and HTML5 format.

The documentation is divided into the following categories:

- User: Operating
- User: Programming
- Manufacturer/Service: Configuring
- Manufacturer/Service: Commissioning
- Manufacturer/Service: Functions
- Manufacturer/Service: Safety Integrated
- SINUMERIK Integrate/MindApp
- Info & Training

1.4 Feedback on the technical documentation

1.4 Feedback on the technical documentation

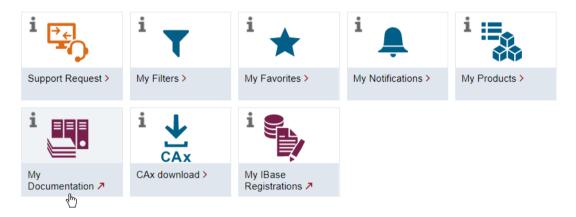

If you have any questions, suggestions or corrections regarding the technical documentation which is published in the Siemens Industry Online Support, use the link "Provide feedback" which appears at the end of the entry.

1.5 mySupport documentation

With the "mySupport documentation" web-based system you can compile your own individual documentation based on Siemens content, and adapt it for your own machine documentation.

To start the application, click on the "My Documentation" tile on the mySupport homepage (<u>https://support.industry.siemens.com/cs/my?lc=en-WW</u>):

mySupport Links and Tools

The configured manual can be exported in RTF, PDF or XML format.

Note

Siemens content that supports the mySupport documentation application can be identified by the presence of the "Configure" link.

1.6 Service and Support

1.6 Service and Support

Product support

You can find more information about products on the internet: Product support (<u>https://support.industry.siemens.com/cs/ww/en/</u>) The following is provided at this address:

- Up-to-date product information (product announcements)
- FAQs
- Manuals
- Downloads
- Newsletters with the latest information about your products
- Global forum for information and best practice sharing between users and specialists
- Local contact persons via our Contacts at Siemens database (→ "Contact")
- Information about field services, repairs, spare parts, and much more (\rightarrow "Field Service")

Technical support

Country-specific telephone numbers for technical support are provided on the internet at address (<u>https://support.industry.siemens.com/cs/ww/en/sc/4868</u>) in the "Contact" area.

If you have any technical questions, please use the online form in the "Support Request" area.

Training

You can find information on SITRAIN at the following address (<u>https://www.siemens.com/</u> sitrain).

SITRAIN offers training courses for automation and drives products, systems and solutions from Siemens.

Siemens support on the go

With the award-winning "Siemens Industry Online Support" app, you can access more than 300,000 documents for Siemens Industry products – any time and from anywhere. The app can support you in areas including:

- Resolving problems when implementing a project
- Troubleshooting when faults develop
- Expanding a system or planning a new system

Furthermore, you have access to the Technical Forum and other articles from our experts:

- FAQs
- Application examples
- Manuals
- Certificates
- Product announcements and much more

The "Siemens Industry Online Support" app is available for Apple iOS and Android.

Data matrix code on the nameplate

The data matrix code on the nameplate contains the specific device data. This code can be read with a smartphone and technical information about the device displayed via the "Industry Online Support" mobile app.

1.7 OpenSSL

1.7 OpenSSL

This product can contain the following software:

- Software developed by the OpenSSL project for use in the OpenSSL toolkit.
- Cryptographic software created by Eric Young.
- Software developed by Eric Young

You can find more information on the internet:

- OpenSSL (<u>https://www.openssl.org/</u>)
- Cryptsoft (<u>https://cryptsoft.com/</u>)

1.8 General Data Protection Regulation (GDPR)

Siemens observes standard data protection principles, in particular the data minimization rules (privacy by design).

For this product, this means:

The product does not process or store any personal data, only technical function data (e.g. time stamps). If the user links this data with other data (e.g. shift plans) or if he/she stores person-related data on the same data medium (e.g. hard disk), thus personalizing this data, he/she must ensure compliance with the applicable data protection stipulations.

1.8 General Data Protection Regulation (GDPR)

Safety notes

2.1 Fundamental safety instructions

2.1.1 General safety instructions

\Lambda warning

Danger to life if the safety instructions and residual risks are not observed

If the safety instructions and residual risks in the associated hardware documentation are not observed, accidents involving severe injuries or death can occur.

- Observe the safety instructions given in the hardware documentation.
- Consider the residual risks for the risk evaluation.

M WARNING

Malfunctions of the machine as a result of incorrect or changed parameter settings

As a result of incorrect or changed parameterization, machines can malfunction, which in turn can lead to injuries or death.

- Protect the parameterization against unauthorized access.
- Handle possible malfunctions by taking suitable measures, e.g. emergency stop or emergency off.

2.1.2 Warranty and liability for application examples

Application examples are not binding and do not claim to be complete regarding configuration, equipment or any eventuality which may arise. Application examples do not represent specific customer solutions, but are only intended to provide support for typical tasks.

As the user you yourself are responsible for ensuring that the products described are operated correctly. Application examples do not relieve you of your responsibility for safe handling when using, installing, operating and maintaining the equipment.

2.1.3 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

2.1 Fundamental safety instructions

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit

https://www.siemens.com/industrialsecurity.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under

https://www.siemens.com/cert.

Further information is provided on the Internet:

Industrial Security Configuration Manual (<u>https://support.industry.siemens.com/cs/ww/en/</u>view/108862708)

MARNING WARNING

Unsafe operating states resulting from software manipulation

Software manipulations, e.g. viruses, Trojans, or worms, can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- Keep the software up to date.
- Incorporate the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation or machine.
- Make sure that you include all installed products into the holistic industrial security concept.
- Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.
- On completion of commissioning, check all security-related settings.

Product overview

SINUMERIK Service Assistance is a MindSphere Application which offers error analysis and troubleshootings for SINUMERIK controllers.

Based on information about the current state of the machine, as well as the record and evaluation of historical data, detailed statements can be made about the customer's situation. As a result, the service call required in the event of a fault can be carried out more efficiently, which enables a reduction in machine downtimes at customer's side.

SINUMERIK Service Assistance offers three digital services:

- Machine Transparency
- Machine Condition
- Machine Error Analysis

3.1 System concept

3.1 System concept

Boundary conditions for Manage MyMachines (MMM) based connectivity

- MindSphere applications already purchased:
 - ManageMyMachines
 - SSA
- MindSphere access exists (IoT tenant).
- Machine is connected via ManageMyMachines.
- MMM Asset Manager Variable Toggles are activated.
- Sinumerik Machine is connected via SINUMERIK Integrate Client (SI client).
- Each application (MMM, SSA) has its own variable set of standard aspects and all must be configured.

Boundary conditions for Brownfield Connectivity Services

- BFC Client and Gateway must be installed and a connection must be established.
- Tenant is available and SSA is purchased and provisioned.
- On the BFC Gateway, the middleware "SSA Service" and "Scriptlogic" are active for SSA gateway
- BFC Gateway must be connected for Mindsphere.

Boundary conditions for Manage MyMachines (MMM) based connectivity considering IOT Value Plan

- MindSphere applications already purchased:
 - ManageMyMachines
 - SSA
- MindSphere access exists (IoT tenant).
- Machine is connected via ManageMyMachines.
- MMM Asset Manager Variable Toggles are activated.
- Sinumerik Machine is connected via SINUMERIK Integrate Client (SI client).
- Each application (MMM, SSA) has its own variable set of standard aspects and all must be configured.

Boundary conditions for Manage MyMachines (MMM) based connectivity considering Package Builder Plan

- Package Builder plan for the SSA package basic is purchased.
- Package Builder plan for the SSA package upgrade for MMM is purchased for additional assets.

- ManageMyMachines application is individually purchased.
- Machine is connected via ManageMyMachines.
- MMM Asset Manager Variable Toggles are activated.
- Sinumerik Machine is connected via SINUMERIK Integrate Client (SI client).
- Each application (MMM, SSA) has its own variable set of standard aspects and all must be configured.

Boundary conditions for Brownfield Connectivity Services connectivity considering IOT Value Plan

- BFC Client and Gateway must be installed and a connection must be established.
- Tenant is available and SSA is purchased and provisioned.
- On the BFC Gateway, the middleware "SSA Service" and "Scriptlogic" are active for SSA gateway.
- BFC Gateway must be connected for Mindsphere.

Boundary conditions for Brownfield Connectivity Services connectivity considering Package Builder Plan

- Package Builder plan for the SSA package basic is purchased.
- Package Builder plan for the SSA package upgrade for BFC is purchased for additional assets.
- Tenant is available and SSA is purchased and provisioned.
- On the BFC Gateway, the middleware "SSA Service" and "Scriptlogic" are active for SSA gateway.
- BFC Gateway must be connected for Mindsphere.

Further information

You can find further information regarding the package builder plans online:SINUMERIK Service Assistance Package (<u>https://siemens.mindsphere.io/content/dam/mindsphere/terms/pdf/</u> <u>App_SINUMERIKServiceAssistancePackage_ProductSheet_SpecificTerms_v1.0.pdf</u>) Product overview

3.1 System concept

Machine Configuration in MindSphere

Machine Configuration in MindSphere

The following chapter describes the necessary steps for connecting a machine to the MindApp **"SINUMERIK Service Assistance (SSA)"**.

Machine connection to MindSphere

Note

For machine connection to MindSphere please refer to MMM Function Manual, Chapter 3 "Setting up the SINUMERIK control system for Manage MyMachines" (<u>https://</u><u>documentation.mindsphere.io/resources/html/manage-my-machine/en-US/index.html</u>).

4.1 Aspect configuration for SSA with MMM

4.1.1 Overview

By Using the MindSphere Tool "Asset Manager" the following Aspects have to be initially configured:

- SINUMERIK_CSPROTECTIONLEVEL
- SINUMERIK_CSRESULTS
- SINUMERIK_CSMACHINESTATUS
- SINUMERIK_TRIGGERINGALARMS

Note

For configuration details of the Aspects see Data Acquisition only in MindSphere (Page 145).

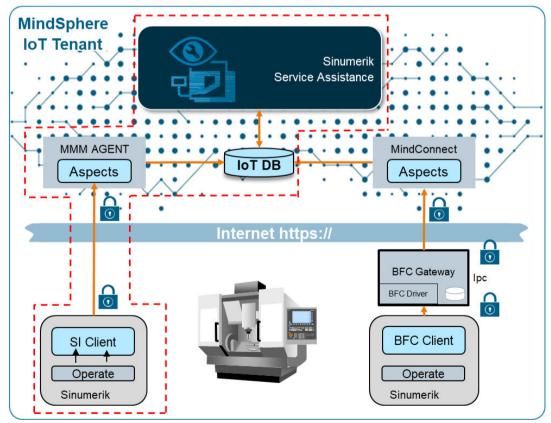

Figure 4-1 Overview aspect configuration

The minimum aspect requirements are listed following table:

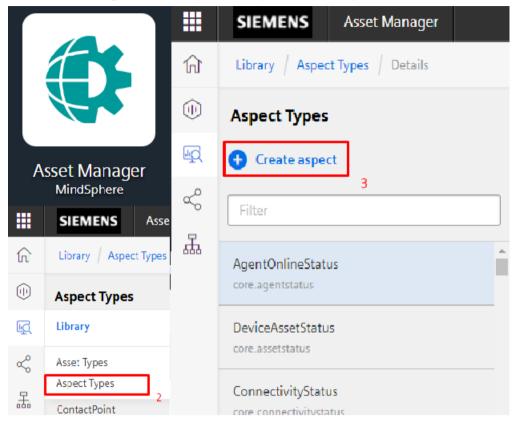

4.1.2 Initial creation of Aspects

Procedure

Repeat the following procedure for all aspects.

Here as an example the Aspect SINUMERIK_CSMACHINESTATUS is created.

1. Load "Asset Manager", select "Aspects" and press "Create aspect".

2. Edit Name and Description.

	SIEMENS Asset Manager					
俞	Library / Aspect Types / Create aspect					
Ę	Create aspect					
Š	 Aspect information 					
놊	Type ID: mmmdev.SINUMERIK_CSMACHINESTATUS					
	Type ID cannot be changed after creation					
	Name: *					
	SINUMERIK_CSMACHINESTATUS					
	Description:					
	Compressed MachineStatus for SSA App					
	219 characters left					

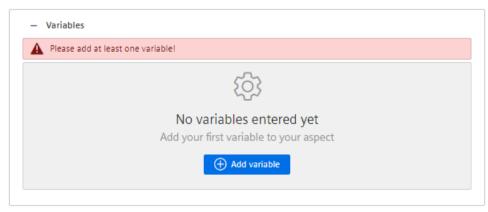

3. Choose category "Dynamic".

C	Choose category:						
	6		The category of an aspect cannot be changed afterwards.				
(ynamic e aspect is used for time-series data				

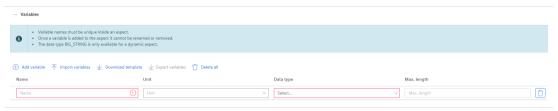

The aspect is used for static data

4. Press "Add variable".

Static

5. Press "Add variable".

6. If required, add further variables and enter Name, Data type and Unit.

🕂 Add variable

7. Press "Save".

4.1.3 Creating Asset Type

Procedure

An Asset Type for every single Machine should be created.

- 1. Load "Asset Manager" and select "Types".
- 2. Expand "BasicDevice".
- 3. Expand "BasicSinumericAsset".

- SIEMENS Asset Manager 俞 Library Asset Types Details \bigcirc BasicAsset ĿQ 🕂 Create type 5 Ś BasicDevice × Asset Manager MindSphere 品 Core types SIEMENS BasicDevice 俞 Library Asset Typ core.basicdevice 3 $(\mathbf{0})$ **BasicSinumerikAsset** BasicAsset core.basicsinumerikasset Library ШQ ∽ Asset Types 2 Aspect Types 놊
- 4. Press "Create type".

5. Edit "Name" and "Description".

4.1.7 Enabling SSA data acquisition

4.1.7.1 Overview

The following describes how to configure the required aspects so that SSA can successfully capture and process the machine data. Here is an example of the procedure described. Details of the configuration are listed in Data Acquisition in MMM - "Time-based / cyclic trigger" (Page 147) and Data Acquisition in MMM - "Variable value-based trigger" (Page 151).

Note

For assets created from type "basicsinumerikasset", shoopfloor aspect configuration will be automated with activation. For more detailed information, see chapter Machine model and auto aspect creation and configuration (Page 38).

The following aspects must be configured via MMM, as "Time-based / cyclic trigger":

- SINUMERIK_CSRAW
- CSM_General_Info

The following aspects for the Axes and Spindles must be configured via MMM, as "Timebased / cyclic trigger":

- CSM_AX01, CSM_AX02, ... (depending on the number of axes)
- CSM_SP01, ... (depending on the number of spindles)

The following aspects must be configured via MMM, as "Variable value-based trigger":

SINUMERIK_CSALARMREACTION

See also

Function Manual Manage MyMachines (<u>https://documentation.mindsphere.io/resources/html/</u> manage-my-machine/en-US/index.html)

4.1.7.2 Machine model and auto aspect creation and configuration

Necessary aspects are created automatically depending on the machine model:

- If asset is onboarded, the machine model will be automatically detected as SINUMERIK 840D sl/SINUMERIK ONE or SINUMERIK 828D.
- If asset is not onboarded, select the machine model manually.

Note

- If machine model of the activated asset is changed after activation, change the machine model manually and save it.
- The address of some variables are different, so the machine model should be corrected to use SSA fully.

Auto aspect creation

Auto aspect creation depends on the machine model. The following aspects will be created:

Note

Condition for auto aspect creation

- Onboard.key downloaded and Manage MyMachine Toggle should be enabled.
- Auto aspect creation is **valid** for asset created from basicsinumerikasset type (MMM customer).
- If asset is created from the derived type from basicsinumerikasset type (e. g: basicsinumerikasset > ssa_asset_type > ssa_derived_asset_type), auto aspect creation is invalid.
- Aspect configuration will be sent only from active services (MC,EA).

Machine Transparency	Machine Condition	Machine Error Analysis
No aspect	• CSM_AX01, CSM_AX02,	SINUMERIK_CSRAW
	CSM_AX03, CSM_AX04, CSM_AX05	SINUMERIK_MACHINESTATUS
	CSM_SP01	SINUMERIK_CSALARMREACTION
	CSM_General_Info	SINUMERIK_TRIGGERINGALARMS
	SINUMERIK_CSRAW	
	SINUMERIK_MACHINESTATUS	
	SINUMERIK_CSRESULTS	
	SINUMERIK_CSPROTECTIONLEVEL	

Procedure

The following procedure gives you an example how to configure an asset.

- 1. After downloading onboard.key and enabling MMM Toggle, choose one of the following applications:
- 2. EITHER Open "Sinumerik Service Assistance". Open the "Activation page" from "Asset Selection page" (only SSA admin).

- OR - Open "Shopfloor Management Application". Click the SSA tab to activation page.

III 5	iEMENS Shopfloor Mgmt. App.

Note

If SSA toggles are enabled before MMM activation, you have to configure the assets manually . For manual aspect configuration, refer to chapter Overview (Page 37).

4.1.7.3 Configuring aspect for "time-based / cyclic trigger" acquisition

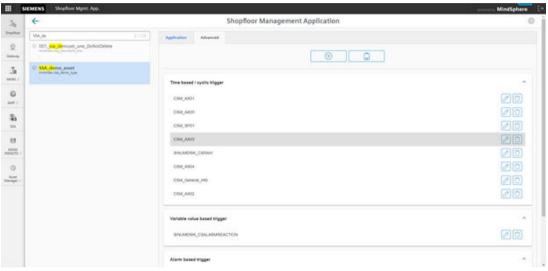

Note

If SSA toggles are enabled before MMM activation, you have to manually configure the assets . For manual asset aspect configruation, this section needs to be followed.

Procedure

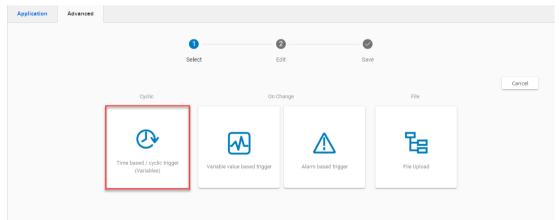

In the following, you can find an example how to configure the Aspect "SINUMERIK_CSRAW":

- 1. Load "Shopfloor Management Application".
- 2. Select your previously created Asset.
- 3. Press "Advanced".

4. Press "Add".

5. Select "Time-based / cyclic trigger (Variables)".

lication	Advanced						
		0	2				
		Select	Edit	Save			
		Q	→ Time base	ed trigger			
						Save	Cancel
							1/999
Create a Cyclic aspe SINUME	-]					٤
Applied Reading cy 5 Secor]2					٩

4.2 Aspect configuration for SSA with BFC Gateway

4.2.1 Overview

To connect a SINUMERIK controller to SSA via the BFC gateway, you carry out the following steps once:

- Creating the asset type "bfc_ssa_sinumerik"
- Connecting a new machine to SSA
- Configuring the BFC client data acquisition
- Creating and saving a machine identity

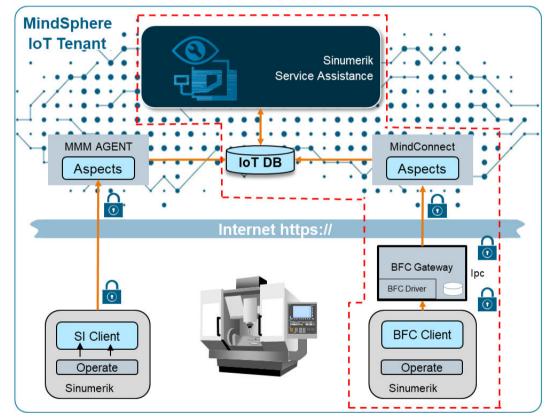

Figure 4-2 Overview aspect configuration

4.2.2 Requirements

The following preconditions must be fulfilled:

• The BFC client is connected to the BFC gateway

Note

Configuration activities for BFC client and BFC gateway are not part of this documentation. For more information about BFC client and BFC gateway, please follow this link:

Function Manual Brownfield Connectivity Services (<u>https://support.industry.siemens.com/cs/at/en/sc/5392</u>)

- MindSphere Tenant is available and set up with Mindsphere Application SSA activated
- The middleware "SSA Service" and "Scriptlogic" are active. More information on this topic can be found in chapter Checking the current status of middleware (logic) (Page 51).

4.2.3 Checking the current status of middleware (logic)

To check whether the middleware "SSA Service" and "Scriptlogic" are active, proceed as follows.

Procedure

- 1. Open the user interface of the BFC gateway.
- 2. Select the "Commissioning" area.
 - In the area "Middleware (Logic)", you will find the entries "SSA-Service" and "Scriptlogic".
 - You can recognize the current status by the symbols to the left of "SSA Service" and "Scriptlogic":
 - The symbol "Running" means "active".

The symbol "Stopped" means "not active".

4.2.4 Creating aspects in Mindsphere

The following aspects must be created in Mindsphere. You can find further information in the chapter Aspect configuration for SSA with MMM (Page 26).

If the aspects listed here do not exist, you must create them.

> CH1_MachineStatus	core.sinumerikbasicmachinestatus	Dynamic	Inherited
ClosedAlarms	mmmdev.ClosedAlarms	Dynamic	Defined
> CSM_AX01	mmmdev.CSM_AX01	Dynamic	Defined
> CSM_AX02	mmmdev.CSM_AX02	Dynamic	Defined
> CSM_AX03	mmmdev.CSM_AX03	Dynamic	Defined 🗍
> CSM_AX04	mmmdev.CSM_AX04	Dynamic	Defined 🗍
> C5M_AX05	mmmdev.CSM_AX05	Dynamic	Defined

> status	core.assetstatus	Static	Inherited

4.2.5 Creating the asset type "bfc_ssa_sinumerik"

If the asset type "bfc_ssa_sinumerik" does not exist in the Asset Manager of MindSphere, you have to create it.

Procedure

- 1. Open the Asset Manager in MindSphere.
 - Click on "Types" in the left hand window area.
 - The "Basic Asset" Windows opens. Navigate to the "BasicAgent" area and select the type "MindConnectLib" from the list in the right-hand window area.

	Asset Manager	
仚	Types	
	< Back	
\bigtriangledown	BasicAgent	
97 ⁰	+ Create type	
Ś	Filter	
뿂	▼ Core types

	MindConnectIntegration core.mcintegration	
	MindConnectIoT2040 core.mciot2040	\bigcirc
	MindConnectLib core.mclib	\bigcirc
	MindConnectNano	

2. The "MindConnectLib" window opens. Click the "Create Type" button.

- 3. The "Create type" window opens.
 - Fill in the input fields. Enter the designation "bfc_ssa_sinumerik" in the "Name" input field.

 Type information 	
Parent type:	
core.basicagent	
Parent type due to hierarchical order	
Type ID:	
mmmdev.bfc_ssa_sinumerik	
Type ID cannot be changed after creation	
Name: *	
bfc_ssa_sinumerik	
Description:	
Description	

- 4. Create the list of aspects according to the following overview.
 - Click on "Add aspect".
 - Select the aspects as shown in the following figure.

CH1 MachineStatus	core.sinumerikbasicmachinestatus	Dynamic	Inherited
CH 1_Machinestatus	core.smumerikoasicmachinestatus	Dynamic	innerited

- Click the "Save" button.

4.2.6 Connecting a new machine to SSA

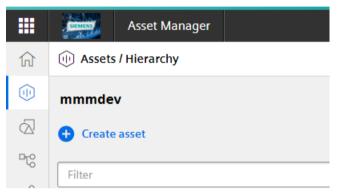

To connect a machine to MindSphere via BFC, perform the following steps:

- Creating a new asset of the type "bfc_ssa_sinumerik"
- Generating connection information of the assets
- Creating a MindSphere gateway for SSA

4.2.6.1 Creating a new asset of the type "bfc_ssa_sinumerik"

Procedure

- 1. Open the Asset Manager in MindSphere.
 - Click on "Assets" in the left-hand window area.
 - In the right-hand window area navigate to the desired location in the asset hierarchy.
- 2. Click the "Add asset" button.

3. Select the asset type "bfc_ssa_sinumerik".

4.2.6.2 Generating connection information of the assets

Procedure

- 1. Open the Asset Manager in MindSphere.
 - Click on "Assets" in the left-hand window area.
 - In the middle area of the window navigate to the BFC asset, you have just created.
 - Click on the arrow in the lower right window area "Connectivity".

4.2.6.3 Creating a MindSphere gateway for SSA

Perform the following steps to create a MindSphere gateway for SSA:

- Step 1: "Select gateway type"
- Step 2: "Define basic configuration"
- Step 3: "Define dataset configuration"
- Step 4: "Define alarm configuration"
- Step 5: "Advanced configuration"

Requirement

The "Commissioning" area is open.

Parameter

Parameter	Description
① Select gateway type	
Select target Store*	Selection of the gateway
2 Define basic configuration	
Type gateway name*	Gateway name
Type gateway description	Gateway description

Parameter	Description
Paste MindSphere connection info*	Connection information
	Entry of the MindSphere connection string in JSON format
	Remark:
	Paste the copied connection key from the clipboard.
Type proxy address if needed	Enter the proxy address if a proxy is required for Internet access
③ Define dataset configuration / Optional	
Pick a client ID	Client ID of the client, from which data is to be sent to MindSphere.
	Remark:
	All IDs of the clients, which were created under this "Plant hierarchy", are displayed.
Pick a dataset	Select the client data set that should be sent to MindSphere.
	Remark:
	All data sets of the selected client ID are displayed
- OR -	
All dataset	All client data is sent to MindSphere
4 Define alarm configuration / Optional	
Pick a client ID	All IDs of the clients, which were created under this "Plant hierarchy", are displayed.
(5) Advanced configuration / Optional	
Remark:	
These fields do not require any entries, and are only	populated by the hotline in the case of service.
Type image path*	Path to MindSphere docker image
Type username to access the image path	Username to access the image path
Type password to access the image path	Password to access the image path
Set message TTL (time to live) in milliseconds*	AMQP lifetime of the data
Set queue expiration in milliseconds*	AMQP queue execution time
Set max queue size*	AMQP maximum queue size
Set max queue size bytes*	AMQP maximum queue size in bytes
Select queue mode*	AMQP queue mode
Set prefetch count*	AMQP prefetch counter
Type alarm topic*	MQTT topic alarm event
Type new reading topic*	MQTT topic new dataset
Environment variable 1	Environment variable to store the data from "CurrentAlarms" as BIG STRING in MindSphere
Environment variable 2	Environment variable to store the data from "MachineModel" as BIG STRING in MindSphere
Environment variable 3	Note that in the variable "IOTGATEWAY_OVER-
	RIDE" the file topic is changed to the client ID of the connected machine.

*: Obligatory data

The character sequence to be used for the various entries is provided in the input windows.

Procedure

1. In the "Gateway (Export)" area, click on "+" to add a new gateway.

- 2. Step 1: "Select gateway type"
 - From the drop-down list, select entry "MindSphere".
 - Click on "Next".

Ad	dd new gateway					
0	Select gateway type					
	Select target Store* MindSphere		•			
	Next					
0	Define basic configuration					
8	Define dataset configuration Optional					
6	Define alarm configuration Optional					
6	Advanced configuration Optional					
			8			

- 3. Step 2: "Define basic configuration"
 - Populate the fields to perform the basic configuration.
 Paste the copied connection key from the clipboard into the "Paste MindSphere connection info" input field.
 - Click on "Next".

	Define basic configuration
	T(pe gataway name*
	my-machine-to-ssa
	Supported lepts/overcate letters, numbers, - (must start vitil letter) 17-15

4.2 Aspect configuration for SSA with BFC Gateway

4.2.7 Configuring the BFC client data acquisition

You can use the BFC client to record certain "data sets". To do this, you must configure selected variables.

Procedure

Configure the variables shown in the following figures.

Dataset name	Amount of Datapoints	
CH1_BasicConfig	This dataset has 9 datapoints	i ~
SINUMERIK_CSRAW	This dataset has 4 datapoints	Î ~

4.2.8 Creating and saving a machine identity

You can store important information such as machine information and address information for each machine using an identSNAPSHOT.xml file.

The creation of an identSNAPSHOT.xml file only applies to SINUMERIK Operate. You can find further information in the chapter Creating identSNAPSHOT file on SINUMERIK controller (Page 74).

Module description

5.1 Overview

The service app **SINUMERIK Service Assistance** is modular and consists of three independent service packages, which can be combined with each other in a customer-specific manner:

• Machine Transparency (Page 94) enables the automated acquisition of information about hardware components and software versions that are used within the machine tool with a SINUMERIK control system. With the help of transparency regarding the components installed at the customer, it is possible for the expert to provide advice on hardware and software handling. Furthermore the Change Protocol page offers information for detecting the changes which are important for experts or any user who cares the machines current state.

Machine Transparency is the base of SINUMERIK Service Assistance (SSA), which means in every combination, Machine Transparency is used.

- Machine Condition (Page 108) enables the cyclic acquisition of advanced state data via the control and drive technology and their targeted evaluation with the help of intelligent analysis methods. Within a MindSphere application, the basic system information such as the SINUMERIK version or the number of axes, the machine accesses with information about the respective protection level as well as the boot events and their causes are recorded and visualized.
- Machine Error Analysis (Page 117)enables the identification and evaluation of error states that occur on the machine tool with SINUMERIK control. For this purpose, the error messages of the machine tool are continuously documented via a MindSphere application. Based on the collected information, a data analysis can be performed to identify the original cause of the error as well as existing causal relationships between the errors that occurred.

5.2 Handling of identSNAPSHOT file

5.2 Handling of identSNAPSHOT file

5.2.1 Overview

All the information in the service Machine Transparency is generated from a single xml file of the controller, called identSNAPSHOT. This file is imported into the app SINUMERIK Service Assistance after creating the identSNAPSHOT file manually on the controller.

Creating and uploading the identSNAPSHOT file is described in this chapter. Furthermore limitations on file upload are listed.

Note

The identSNAPSHOT file needs to be created manually with the instructions below every time there is a change (software or/and hardware) on the machine.

5.2.2 Creating identSNAPSHOT file on SINUMERIK controller

Procedure

1. Open SINUMERIK Operate and select the "Diagnostics" operating area. Diagnostics Press the "Version" softkey. 2. Vill Version It takes some time to call the version display. While the version data is being determined a progress message box and the appropriate text are displayed in the dialog line. Press the "Save" softkey. 3. Save The "Save version information: Select Archive" window opens. The following storage locations are offered depending on the configuration: Local drive • Network drives USB • • Version data (archive: Data tree in the "HMI data" directory) 4. Then press the "New directory" softkey if you wish to create your own New directory directory. Press the "OK" softkey. The directory is created. 5. 0K Press the "OK" softkey again to confirm the storage location. 6. 0K The "Save version information: Name" window opens. 7. Specify the desired settings.

- "Name:" input field the file name is pre-assigned with <Machine name/no.>+<CF-card number>. "_config.xml" or "_version.txt" is automatically attached to the file names.
- "Comment:" input field You can enter a comment that is stored with the configuration data.
- Version data (.TXT) Deactivate the checkbox.
- Configuration data (.XML) Activate the checkbox.
- 8. Press the "OK" softkey to start the data transfer.

Stadard paths for identSNAPSHOT file on NCU/PCU

NCU /user/sinumerik/hmi/data/version/ PCU C:\Program Files (x86)\Siemens\MotionControl\user\sinumerik\hmi\data\version\

Result

After the process is completed, the identSNAPSHOT file should appear under the path "/user/ sinumerik/hmi/data/version".

5.2.4 Limitations on file upload

The following file upload feature limitations come from Manage MyMachine (MMM) project:

Note

File Upload Limitations

For file upload limitations , please check MMM readme documentation (<u>https://documentation.mindsphere.io/resources/html/manage-my-machine-readme/en-US/index.html</u>).

Supported directories and folders

To ensure secure file upload, a white list is defined, which limits the configured path of a file upload item. A file upload item's path must follow the limitation rules which are presented below:

Directories for BFC Gateway

Below directory list is supported for fileupload operation and SSA. You cannot upload files from other directories and use it in SSA:

- C:\temp\files\ On the PCU
- C:\temp\datatransfer\ On the PCU
- /var/temp/datatransfer/ On the NCU
- /var/tmp/ On the NCU
- /user/sinumerik/hmi/data/version/ On the NCU

Directories for MMM

All MMM directories are supported by SSA.

Special directory: C:/temp/files

For the C:/temp/files, it must be configured as <temp>/files in the MTA Asset Config.

Note

Epsconfig.xml : temp file is C:/temp for PCU

Directory of <temp> comes from epsconfig.xml. Don't change this path and epsConfig tempdir must not end with *l*.

File Extensions

Only .xml extension is supported by SSA.

Note

Name of identSNAPSHOT

The name of identSNAPSHOT must be like one of these below:

- <filename>_config.xml
 i.e: SPG2019052401933 config.xml
- <file_name>_config_<DD-MM-YYYY_HH-MM-SS-SSS>.xml i.e:000060161897FC000014_config_01-04-2020_21-39-58-101.xml

Sending the correct files or adding the files under the specific file upload directories belongs to user's own responsibility.

Note

Because of Fanuc File Transfer driver not implemented yet, file upload functionality on Fanuc machines is currently not supported.

5.2 Handling of identSNAPSHOT file

5.2.5 Uploading identSNAPSHOT file via Fleet Manager

Procedure

- 1. Extract the identSNAPSHOT file from the controller.
- 2. Connect to MindSphere and go to "Fleet Manager" app.

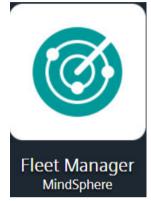

Figure 5-3 Logo Fleet Manager

- 3. Search and select your asset name.
- 4. Select files tab.

Fleet Manager	
SSA_840D_1

	mconf_config.xml
SSA_840D_2 mmmdev ssa sinumerik derived type 01	*

Figure 5-4 Fleet Manager files tab

- 5. Press "Upload".
- 6. Select your identSNAPSHOT.
- 7. Press "Open".

5.2 Handling of identSNAPSHOT file

Note

Name of identSNAPSHOT

The name of identSNAPSHOT must be like one of these below:

- <filename>_config.xml

 i.e: SPG2019052401933_config.xml
- <file_name>_config_<DD-MM-YYYY_HH-MM-SS-SSS>.xml i.e:000060161897FC000014_config_01-04-2020_21-39-58-101.xml

5.3 Asset Selection

The Asset Selection page is the main page of the app SINUMERIK Service Assistance. It offers an overview over all the connected controllers.

Note

Select one of the assets in the table, before choosing one of the main services of the app:

- Machine Transparency
- Machine Condition
- Machine Error Analysis

Figure 5-5 Asset Selection

The following values are shown in a table:

- Asset Name
- Description
- City
- Asset Status
- Connection Status
- Configuration Status

You can search or filter the table after certain values.

Asset Status

Symbol	Meaning
\diamondsuit	A Warning has occurred when there is an organiza- tional disturbance or the controller is used in a user (service) or service (commissioning engineer) ac- cess level
	An Error has occurred when there is a technical dis- turbance or the controller is used in a manufacturer (development) or Siemens access level.
\bigcirc	Everything is okay when there is no disturbance and the controller is used in a key-switch access level.
	If CH1_MachineStatus/ SINUMERIK_CSPROTEC- TIONLEVEL is not configured, this symbol appears.

Connection Status

Symbol	Meaning
Ś	Controller is connected
ල්ම	Controller is disconnected
	If AgentOnlineStatus is not configured, this symbol appears.

Configuration Status

Symbol	Meaning
24.02.2021	Upload date of the last acknowledged IdentSNAP-SHOT file
\checkmark	Acknowledged IdentSNAPSHOT file in New Asset Selection (Page 84)
<u>A</u>	Symbolizes a change in the configuration.
	No configuration

Remaining Trial Usage

With this feature you can see the remaining days and hours during the trial period. This line is only visible if you have activated trial usage.

Interlinking to Change Protocol

By clicking the warning symbol on the configuration column, you will be directed to the Change Protocol page.

5.3.1 New Asset Selection

The "New Asset Selection" menu offers the opportunity to change the asset during the activation of a certain page. Also, It offers an overview over all the controllers.

The New Asset Selection menu is available for the following pages:

- Machine Error Analysis > Alarms
- Machine Error Analysis > Triggering Alarms for Disturbances

You can pop up the "New Asset Selection" menu by clicking on the arrow on the left hand side of the page. You can also collapse the "New Asset Selection" menu to reach full screen mode again.

_	TEST_RW_2_D ॐ──	*
⊖ssa ⊘c	_TEST_RW_DoN ア <u>ヘ</u>	*

The star is highlighted and the item has been chosen as a favorite.

Note

Deleting a favorite

If you want to remove a favorite, click on the favorite link (star) again.

Note

Browser cache

Please be aware that favorite assets are stored in the browser cache. If you delete your browser cache favorite assets will be lost.

5.3.2 Billing

5.3.2.1 Billing systems

After the SSA application is purchased and registration is done, it is required to activate billing toggles of SSA assets. By that way, SSA components (Machine Transparency, Machine Condition and Machine Error Analysis) are going to be enabled. Each component has a different pricing. Please check the product sheet from the Activation Page pop up, before enabling it:

Confirm Payment	×
The changes listed below will be saved. • Asset_20_07_2020_15_36_22 activated Machine Transparency	
By activating/deactivating the selected options, I hereby accept the terms and conditions as well as the price model: (Link to Productsheet) During the Trial period the use of charge.	of the application is free of
Activate for a fee/deactivate Cancel	

Figure 5-8 Pop up Activation page - confirm payment

5.3.2.2 Activation page

The activation page can either be accessed from Shopfloor Management Application or from the settings icon of the SINUMERIK Service Assistance. On the activation page it is possible to activate/deactivate services and see the summary of activated assets. You can search for assets and add or delete columns with the "Column Chooser."

Note

Please keep in mind that Activation Page can be used by SSA admins only.

Note

Only assets created from MindConnectLib or BasicSinumerikAsset type are shown on the activation page.

Figure 5-10 Shopfloor Management Software: Activation page view

Note

Please keep in mind that if SSA admin right are missing, the user will see an empty page in Shopfloor Management View.

Choosing machine model

In the table of the activation page it is also possible to choose a valid machine model for the listed assets. You can select a valid machine model by choosing a control in drop down menu.

Adding extra column from Column Chooser

1. Press "Column Chooser".

		国
Machine Transparency	Machine Condition	Machine Error Analysis

- 2. Select checkbox to add the desired column.
- 3. Close the "Column Chooser".

Showing active assets as a count

With this feature, you can learn how many assets are active and active with MT(Machine Transparency), MC(Machine Condition) and EA(Machine Error Analysis). It is located on the left side of the top.

Total Active Assets: 7 Active assets with MT: 4 Active assets with MC: 4 Active assets with EA: 5

Note

Only assets which have prior been activated and saved, are counted as active in the counter.

Activating billing toggles of assets

Note

Activation from Shoopfloor Management Application

Activation operations also can be executed from the Shoopfloor Manangement Application by SSA admin. Only SSA admin will see the SSA button on the Shoopfloor Manangement Application.

Repeat the following procedure for all activations. In this example Machine Condition and Machine Error Analysis are activated for one asset.

1. Open the "Activation page" from "Asset Selection page" (only SSA admin).

2. Search the asset, which will be purchased.

ime	Machine Model	Description	Machine Transparency	Machine Condition	Machine Error Analys
mmmdev					
SSA_840D_1	840/ONE •	Asset for connecting my SINUMERIK Machine to SSA	Active	Inactive	Inactive

3. Select the Machine Model, if the asset is not onboarded ever.

					é
Name	1 Machine Model	Description	Machine Transparency	Machine Condition	Machine Error Analysis
Q, SSA_840D_1	Q	Q			
 mmmdev 					
SSA_840D_1	828 -	Asset for connecting my SINUMERIK Machine to SSA	Active	Active	Active
		Save Cancel			

4. Change toggles to "Activate".

SSA_840D_1	Q	Q				
mmmdev						
SSA_840D_1	840/ONE	-	Asset for connecting my SINUMERIK Machine to SSA	Active	Active	Active 📕 😔

5. Press "Save".

6. Press "Activate for a fee" or "Yes, I have a valid contract" (depends on billing system).

Activate for a fee	Yes I have a valid contract
--------------------	-----------------------------

7. A notification is shown that saving is successful. After the configuration is saved, you can see new icons (configured / not configured) next to the toggles.

8. Click "Asset Selection". You will see the assets in a list.

Asset Name 1 T	Description T	City 👻	Asset Status 🛛 🔻	Connection Status 🔻	Configuration 🔻 Status

Figure 5-14 Error message - Machine Error Analysis

Rules of purchase

Note

During trial period, you can access all services of an active asset, which is correctly configured.

- All activation will start immediately.
- All deactivation will start at the beginning of the next month.
- All services which are enabled after the last day of the month at 13:00 will be charged for the next month.
- Service usages will be calculated based on total usages days of service, after that it will be divided into days in the month. The result will be rounded to the upper digit.

Asset not found

If you try to get data of an asset, which does not exist in MindSphere (e. g: Asset not found (<u>https://mmmdev-ssa-mmmdev.eu1.mindsphere.io/#/Transparency/Overview?assetId=aa</u> // XmlEditor.InternalXmlClipboard:abffb0ad-8731-a519-d192-1743afd82a03)), you will see the following screen:

Figure 5-20 Hardware Components List View

Note

Exported hardware components

Please note, that the .xls file is downloaded to default file location, which is set from browser settings.

Note

SIOS link

By clicking on the MLFB number you can directly open the Siemens Industry Online Support (SIOS) page. This way you can find related user manuals, handbooks or engineering manuals for the hardware components.

Acknowledgment feature

The SINUMERIK Service Assistance application provides an acknowledgment feature for detecting the changes which may harm the machine or enlightening some crucial changes on machine side. With this feature, system can detect the following hardware changes:

- which hardware components have been replaced with new ones
- which hardware components have been removed or are missing

When an identSNAPSHOT file is uploaded to an asset for the first time, there is no warning about it. But when another identSNAPSHOT file is uploaded to the asset and if there are any changes between current and previous file, you will be warned with an unacknowledged sign on the component name and corresponding items' status section. Additionally, the differences between the current value and last acknowledged value of the components' items are shown.

Figure 5-21 Acknowledgment Hardware Components

To acknowledge a component select the component in the tree view and click the acknowledge button.

You can directly navigate to the Change Protocol page by pressing the Change Protocol button.

5.4.4 GSP (Global Service Platform)

To give a better support to Siemens customers, Hardware components will be registered to the Global Service Platform (GSP) automatically by checking identSNAPSHOT file daily. If you have a new or updated identSNAPSHOT file, tenant admin or specified subtenant user will get a notification email after the ion of the component.

Registering subtenant user for email notification

1. Check the checkbox.

Name ↑	Machine Model	Description	Machine Transparency	Machine Condition	Machine Error Analysis
Q	Q	٩			
* mmmdev					
-SSA_Asset_05_05_2021_13_23_03	Select •	Automation First Asset	Inactive	Inactive	Inactive
001_Mimic_ganttChart_issue	Select		Inactive	Inactive	Inactive
- AMP		Different email address for GSP:			
AMP_WorkpieceCount_DoNotDelete	828 -	AMP_WorkpieceCount_DoNotDelete	Inactive	Inactive	Inactive
AMP_MachineStatusCache2_DoNotDelete	828 -	AMP_MachineStatusCache2_DoNotDelete	Inactive	Inactive	Inactive
AMP_MachineStatusCache_DoNotDelete	828 -	AMP_MachineStatusCache_20_02_2021	Inactive	Inactive	Inactive

2. Insert the email address.

AMP	Different email address for G	GSP: 🗸
	simple@example.com	\otimes

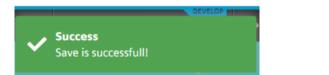

3. Press "Save".

4. Press "Activate for a fee" or "Yes, I have a valid contract" (depends on the billing system).

Activate for a fee	Yes I have a valid contract
--------------------	-----------------------------

5. A notification is shown that saving is successful.

Note

If subtenant user isn't determined, the tenant admin of the host tenant will get the notification.

Note

If you have no account for the registration website yet, it will be created and you will get an email to complete account registration.

5.4.5 Logbook and Licenses

The Logbook and Licenses page shows information on the Logbook of the controller and the installed and active licenses. You can choose one of the following views:

- Logbook
- Licenses

Logbook view

The logbook view shows all relevant information about the logbooks of the controller:

- First Commissioning: Date, when the controller was commissioned at the machine builder's site.
- End of Commissioning: Date, when the controller was running at the customer's site.
- Logbook Entries: Number of Entries in the logbook
- Logbook Last Entry Date: last date, when an entry was added to the logbook
- Machine ID: machine ID of the controller

Figure 5-27 Software Components List View

Note

Exported software components

Please note, that the .xls file is downloaded to default file location, which is set from browser settings.

Acknowledgment feature

The SINUMERIK Service Assistance application provides an acknowledgment feature for detecting the changes which may harm the machine or enlightening some crucial changes on machine side. With this feature, system can detect the following software changes:

- which softwares at the machine is upgraded/downgraded
- which new softwares are added/removed

When an identSNAPSHOT file is uploaded to an asset for the first time, there is no warning about it. But when another identSNAPSHOT file is uploaded to the asset, you will be warned with an unacknowledged sign on the component name and corresponding items' status section. Additionally, the differences between the current value and last acknowledged value of the components' items are shown.

Figure 5-28 Acknowledgment Software Components

To acknowledge a component select the component in the tree view and click the acknowledge button.

You can directly navigate to the Change Protocol page by pressing the Change Protocol button.

5.4.7 Change Protocol

The Change Protocol page offers information for detecting the changes which are important for experts or any user who cares the machines current state. With this feature, system can list the following changes:

- Software changes
 - which softwares at the machine is upgraded/downgraded
 - which new softwares are added/removed
- Hardware changes
 - which new hardware added
 - which hardware is removed or missing.
- License changes
 - which licenses are newly added
 - which licenses are missing

5.5.2 Process Data

The Process Data page offers a graphical view of variables of the controller over a certain period.

Setting up a graph

To set up a graph proceed as follows:

1. Select a time range in the drop down menu "Selected Time Range".

Note

Restriction on time range

Please note, that if you select 30 days as time range, there will be a note to use a smaller date range (max. 7 days).

- 2. Select one or several units (maximum three units).
- 3. Select one or several Aspects. One Aspect may consist of several variables itself.

Figure 5-33 Process Data

The constructed graph shows the change of the variables over the selected time range. You can zoom in and out of the graph by marking a rectangular area with the mouse.

Machine indicators

Note

To learn more about the meaning of variables, click on the trademark symbol (i button).

Indicators	Variables
Motor Temperature	AX01_Motor_TempSP01_Motor_Temp
Machine Alarms	NrOfAlarms
Override Status	Feedoverride
	Spindleoverride
Machine Status	MachineStatus
Program Status	NCProgramStatus
	OpMode
	ProtectionLevel
	StopCond
Online Status	OnlineStatus

If you reach the limitation of indicator selection, you will see the following warning:

The units of aspects are listed the following table:

5.5.3 Security Level

The Security Level page offers an overview of users of the machine with different access levels. If there is a problem with the control, the service technician can monitor which person was working at the control at what time.

Setting up a graph

To set up a graph proceed as follows:

1. Click on the graph icon, if it's not already activated.

 Select a time range in the drop down menu "Selected Time Range". A graph shows how many times a user with a certain access level has used the control.

5.5.5 Boot Monitoring

The Boot Monitoring page offers a graphical and a list overview of boot events over a certain period.

Setting up a graph

To set up a graph proceed as follows:

1. Click on the graph icon, if not already activated.

2. Select a time range in the drop down menu "Selected Time Range". A graph shows how many times a certain boot event has occurred at the control.

Figure 5-38 Boot Monitoring Graph

Table of values

1. Click on the table icon, if not already activated.

A table shows the exact date and time, when a certain boot event occurred at the control. It is possible to search for values in the search box above the table. Furthermore it is possible to export the table to an excel file (*.xls) by clicking the button "Export to XLS".

Figure 5-39 Boot Monitoring Table

Depending on the including closed alarm, there are two different user interfaces of "Error Analysis" page. If asset includes ClosedAlarms Aspect, new user interface is shown. Otherwise, old user interface is shown.

Warning messages for asset without ClosedAlarms Aspect in the new user interface

Within the new user interface, when you select asset which does not have ClosedAlarms Aspect, the following warning message will be shown:

Figure 5-40 Error Message: There is no ClosedAlarms Aspect

Note

You can see the Error Analyses Page of the asset which does not have ClosedAlarms Aspect via SSA main page Asset Selection (Page 82).

Within the new user interface, when you select an asset without permission for Error Analysis, the following warning message will be shown:

Machine Error Analysis
⊗This service is not available for your asset.
Please contact your ssa admin for missing aspect configuration or activation of your assets from the application settings. 🛠 Machine Error Analysis Service provides: Alarms, Triggering Alarms for Disturbances

Figure 5-41 Error Message: No Permission

5.6.1 Machine Error Analysis for an asset with ClosedAlarms Aspect

Note

There is no Overview page for asset which has ClosedAlarms Aspect.

5.6.1.1 Alarms

The Alarms page offers a graphical and a list view of alarms provided by machines. This page is able to show alarms by filtering values, i.e. date range, source etc. Therefore this alarm monitoring page offers a quick and detailed communication between end user and system.

Module description

5.6 Machine Error Analysis

Setting up a list

To set up a list proceed as follows:

1. Click on "List View", if not already clicked.

List View

Then the List View of data will be displayed as shown below:

Graphic export

It is also possible to print and export PNG, JPEG, PDF and SVG files for charts. Additionally, export and print functionality works by considering filtered data.

To perform a graphic export proceed as follows:

1. Click on below button in the Chart View.

Filtering for an alarm

The Alarm page has 6 filter mechanisms, working dynamically. These are listed below:

- Select Date
- Active/History
- Clear Info
- Number Range
- Source
- Text
- Alarm Condition

Select Date

The system can have data in different time range. To show related data in different time range, "Select Date" is used. "Select Date" has two main sections such as "UTC" or "Browser".

If you select UTC, a query is triggered for UTC+0. Otherwise, a query is triggered for UTC+TimeZoneOffset.

Today	<					Ap	ril 2022	2 - May	2022					>
Yesterday	5	м	Ŧ	W	τ	F	5	5	М	i.	W	T	F	s
Last 7 Days	APR					1	2	MA	ć					
Last 30 Days	3	4	5	б	7	8	9	1	2	3	4	5	б	7
This Month	10	11	12	13	14	15	16	8	9	10	(11)	12	13	14
ast Month	17	18	19	20	21	22	23	15	16	17	18	19	20	21

💽 Local 🔿 UTC								29	30	31				
✓ ×	00:00					23:59						All	Dav	

Figure 5-46 Select Date

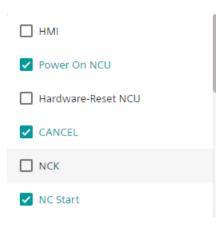

Active/History

The system can have closed or pending alarms. To show these alarms, Active/History is used. To list both alarms, click on "History". To list pending alarms, click on "Active".

Active	
History	

Clear Info

The system can have a variety of data for clearing info to show related alarms. "Clear Info" is used for this purpose has a multi selection combo box.

Number Range

The system can have a variety of data for number range and alarm number. To show related alarms, "Number Range" is used, which has a multi selection combo box.

✓ NCK General Alarms (0-9999)
NCK Channel Alarms (10000-19999)
NCK Axis/Spindle Alarms (20000-29999)
NCK Functional Alarms (30000-99999)
HMI System (100000-129999)
HMI OEM (130000-139999)

Source

The system can have a variety of data for source. To show data with each unique source, "Source" is used, which has a multi selection combo box.

NCK
PLC
HMI

Text

All alarms have an unique text. You can filter the list by the given text.

Text

Alarm Condition

Alarm condition includes 6 options to search for data. This search mechanism works by checking "Alarm No" on data.

Equals to
Does not equal to
Less than
Greater than
Less than or equal to
Greater than or equal to

For example, if you want to filter data which has alarm number 6020<x<6060.

- Select "less than" and give value: 6060
- Select "greater than" and give value: 6020

Clear all filters

After selecting one of the combo boxes of filter parameters, "Clear all filters" will appear and will be active. To reset all filters, click the "clear all filters" button. After cleaning filters, the button will disappear.

Creating favorites for filtered alarms

For filtered alarms, you can create favorites to make it more easy to distinguish preferred alarms. You can create your own user-defined alarm filters to monitor specific alarms.

- 1. In upper right corner of the alarms page, the outline of a quick favorite link (star) can be seen.
- 2. Select any filter, for example "Clear Info", "Number Range", "Source", "Text" and/or "Alarm Condition".
- 3. Click on the quick favourite icon and then on "Add to favorites"
- 4. Give a filter name and confirm.

Figure 5-47 Favourites for filtered alarms

After confirmation selected filter has been highlighted, and the item has been chosen as a favorite.

Note

Deleting a fovourite

If you want to remove a favourite from the list of favourites, click on the garbage icon.

Note

Browser cache

Please be aware that favorites for filtered alarms are stored in the browser cache. If you delete your browser cache favorites for filtered alarms will be lost.

Restrictions for best usage for asset with ClosedAlarms Aspect

Please consider the following restrictions, in order to work with Machine Error Analysis with high quality:

- There should be max 400 active alarms.
- There should be max 100000 closed alarms.
- There should be max 1000 multiday alarms.

Active Alarms: Alarms are started but not finished.

Closed Alarms: Alarms are started and resolved in the same day. (UTC+0)

Multiday Alarms: Alarms are started and resolved in the different day. (UTC+0)

5.6.1.2 Triggering Alarms for Disturbances

The "Triggering Alarms for Disturbances" page offers a graphical and a list view of technical disturbances or Alarm Reaction / NC stop. Alarms within +/- 60 seconds are listed for that technical disturbances or Alarm Reaction / NC stop

Setting up a list

To set up a list proceed as follows:

1. Click on "List View", if not already clicked.

List View

Then the List View of data will be displayed as shown below:

	Siemens	AG SINUMERIK Service	e Assistance								powered by MindSphere

Figure 5-48 Triggering Alarms for Disturbances, Technical Disturbances, List View

You can switch between "Technical Disturbances" view and "Alarm Reaction/NC Stop" view.

Setting up a graph

To set up a graph proceed as follows:

1. Click on "Chart View", if not already clicked.

Chart View

Then the Chart View of data will be displayed as shown below.

This graph has additional feature to improve performance. This feature is pagination functionality.

You can navigate between pages of the graph.

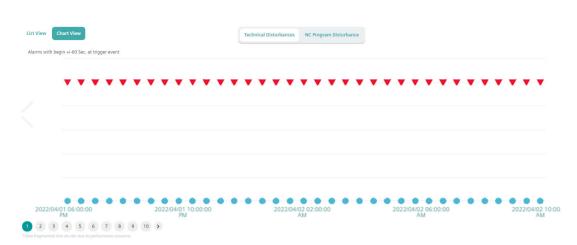

Figure 5-49 Triggering Alarms for Disturbances, Technical Disturbances, Chart View

You can switch between "Technical Disturbances" view and "Alarm Reaction/NC Stop" view.

Export functionality

It is possible to export an excel file(*.xls). This button will be active, when there is data on a table. Additionally, export functionality works by considering filtered data.

To perform a data export proceed as follows:

1. Click on "Export" button in the List View.

Filtering for an alarm

The "Triggering Alarms for Disturbances" page has 6 filters mechanisms working dynamically. "Triggering Alarms for Disturbances" page has same logic as "Alarms" page. For a detailed description, see Alarms (Page 117).

Creating favorites for filtered alarms

"Triggering Alarms for Disturbances" page has same logic as "Alarms" page. You can also create favorites for filtered alarms. For a detailed description, see Alarms (Page 117).

5.6.1.3 Alarm Trend

The "Alarms Trend" page offers a list view of trends of selected alarms in the selected date range. Alarm Trend data can be filtered as Active or History.

Activating Alarm Trend

1. Click on the Alarm Trend icon, which exists on the pages "Triggering Alarms for Disturbances" and "Alarms".

Alarms with the same numbers will be listed in the selected date range.

						ssa_demoset_one_DoNotDelete
Currei	nt Alarms				Alarm History	
					Number of Alarms within 8 hours: Number of Alarms within last day:	
					Number of Alarms within last 7 days:	
Trigge	ering Alarms for I	Disturbances				
	Disturbances within 7 days: ion / NC Stop within 7 days:					

Figure 5-51 Machine Error Analysis

The following values are shown for each cluster:

- Current Alarms:
 - Number of current alarms
 - thereof with high priority
- Alarm History:
 - Number of alarms within 8 hours
 - Number of alarms within last day
 - Number of alarms within last 7 days
- Triggering Alarms for Disturbances:
 - Triggering Disturbances within 7 days
 - Alarm reaction / NC Stop within 7 days

Note

Restrictions for best usage for an asset, which does not have ClosedAlarms Aspect

Please consider the following restrictions, in order to work with Machine Error Analysis with high quality:

- There should be max 10 current alarms.
- There should be max 1000 alarms in alarm history.

5.6.2.2 Current Alarms

The Current Alarms page offers a graphical and a list view of current alarms, which are active at the control over the period of one day.

Module description

5.6 Machine Error Analysis

Setting up a graph

To set up a graph proceed as follows:

1. Click on the graph icon, if not already activated.

A graph shows which alarms occurred at what time at the control.

2. Select a time range in the drop down menu "Selected Time Range".

You can zoom in and out of the graph by marking a rectangular area with the mouse.

Table of values

1. Click on the table icon, if not already activated.

The table below shows detailed information on the historic alarms. Furthermore it is possible to export the table to an excel file (*.xls) by clicking the button "Export to XLS".

5.6.2.4 Triggering Alarms for Disturbances

The Triggering Alarms for Disturbances page offers a graphical and a list view of technical disturbances and NC stops, which occurred at the control 60 seconds ago and lasted for antother 60 seconds.

Setting up a graph

To set up a graph proceed as follows:

1. Click on the graph icon, if not already activated.

- 2. Select a date range in the drop down menu "Selected Date Range".
- 3. Select either tab "Techn. Disturbances" or "Alarm Reaction / NC Stop".

A graph shows which technical disturbances or NC stops occurred at the control in the selected date range.

5.6.4 Failure Analysis

Overview

Machine failure analysis, in terms of technical disturbances and NC stops, are important for the user to determine the critical problems within the machine and indicate main causes of downtimes.

It is important to see and interact with these failures with a combination of dashboard containing "Machine Status", "NC Program Status", and "Operation Mode", so that the user can define the root-cause and prevent the triggering of these disturbances.

All states which are available for the user refer to the "Machine Status", "NC Program Status", and "Operation Mode". The states are listed below and have to be presented to the user with a list of technical disturbances within the "Failure Analysis" functionality:

- General Status: Machine Off, Unknown
- Machine Status: Production, Technical Disturbance, Organizational Disturbance, no Disturbance
- NC Program Status: Stopped, suspended, running, waiting, aborted
- Operating Mode: JOG, MDA, AUTO

To reach this state of functionality, MMM connectivity will be used.

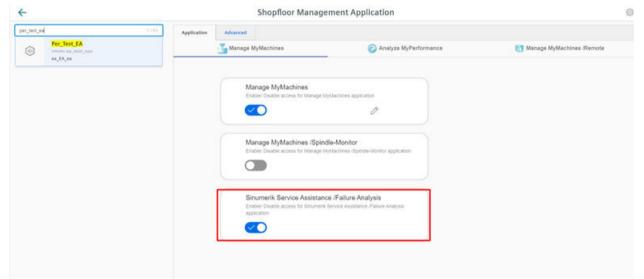

The following requirements have to be fulfilled:

- Purchasing SSA and MMM: "Failure Analysis" is a feature of SSA and an add-on for MMM.
- Purchasing Error Analysis Service (complete for related Asset): Failure Analysis works depending on Tech Disturbance.

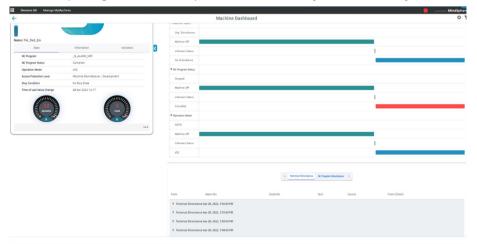

You have to activate the toggle for "Machine Error Analysis".

					<u>6</u>
Name 7	Machine Model	Description	Machine Transparency	Machine Condition	Machine Error Analysis
Q. MMMSSA217_DoNotDelete	Q	٩			
- mmmdev					
MMMSSA217_DoNotDelete	828 •		Inactive	Active 📕 ⊘	Active 📕 🕗

• Activating "Failure Analysis" Service on Shopfloor Management Application. For activation of the "Failure Analysis" service, admin rights are required.

After completing the described process, Failure Analysis will be ready to use.

Naming of aspects

The naming of these aspects do not have to be named as stated above. The naming might still be different, i.e. for optional axes. Here is an example of the axes defined in another tenant. As shown, the naming "CSM_AX_W_Achse" differs from the ones stated above.

A.5 Clarification of machine variable parameters

A.5 Clarification of machine variable parameters

In chapter Data Acquisition in MMM - "Time-based / cyclic trigger" (Page 147) the variables for the aspect configuration are listed. There are specific variables assigned to the controller like "param", "slave number", "drive number", "io system nr". These variables are coded in parameter numbers, i.e. "35,3,4". This example describes how these variables are observed and determined.

Variable and parameter numbers

The following screen in SINUMERIK Operate shows the connection between variables and parameter numbers:

3 21 Linear CHRH1 Ia 4 SP1 Spindel 4 SERV0_3.3.3 ARM CHRH1 5 SP2 Spindel 5 SERV0_3.3.1 ARM CHRH1 5 SP2 Spindel 5 SERV0_3.3.1 ARM CHRH1 <	Maschin ndex h	ienachse Name	Тур	Antri Nr.	ieb Bezeichner	Motor Typ	Kanal

A.6 Supplementary documentation

This manual describes only the advanced administration tasks for using **SINUMERIK Service Assistance Mindsphere Application**. The instructions for the machine connection to MindSphere via **Manage MyMachines** are not part of this manual.

If you need support to connect your machine via Manage MyMachines to MindSphere, use the links below:

- Function Manual Manage MyMachines (<u>https://documentation.mindsphere.io/resources/</u> <u>html/manage-my-machine/en-US/index.html</u>)
- Readme Manage MyMachines (<u>https://documentation.mindsphere.io/resources/html/</u> manage-my-machine-readme/en-US/index.html)

For further information on installation of Brownfield Connectivity Services (BFC) please refer to Function Manual. (<u>https://support.industry.siemens.com/cs/at/en/sc/5392</u>)

Appendix

A.6 Supplementary documentation

Glossary

Asset

For MindSphere, an asset is each connected element that provides data. This can be a machine or an individual component. In conjunction with this documentation, an "asset" is a connected controller.

Manage MyMachines

MindApp that displays the operational and plant-specific data of machine tools configured in MindSphere.

MindSphere

MindSphere – the open cloud platform from Siemens – is the core component of a highperformance IoT operating system. It offers data analysis, comprehensive connectivity, tools for developers, applications and services. MindSphere supports you in the analysis and utilization of your data in order to obtain new insights. In this way, you can optimize your resources for maximum availability
